ABOUT ME

I am a Certified Engineering Technologist with over 20 years of experience in industrial, utility, and manufacturing sectors. I specialize in the commissioning, testing, and maintenance of medium and low voltage switchgear, transformers, relays, and control systems. Throughout my career, I have taken on increasingly challenging roles, including leading field service teams across Canada. I possess a robust technical skill set in AC/DC protection, SCADA systems, and automated systems integration. With extensive hands-on experience and a passion for innovation, I strive to deliver high-quality solutions that enhance operational efficiency and safety.

PERSONAL PREFERENCES

Work Shift:

14 days on, 14 days off is my favorite shift, but I am open to other reasonable options with an overtime banking plan.

Job Location:

Canada / USA West Coast combo with multiple locations is my favorite. Other parts of Canada, the USA, and Europe work for me too. I have unconditional work authorization in Canada and the European Union (Canadian and EU citizen).

Travel:

I have no problem with travel as long as shifts are reasonable and I am paid for travel time.
